

# "I NEVER THOUGHT THAT DESIGNING ON A COMPUTER COULD LET US ACHIEVE THE QUALITY WE DEMAND"

Jeremiah Eck,  
Award-winning firm  
Jeremiah Eck Architects  
Boston, MA

expect it to actually increase his design skill. "It's not just a tool for drawing. It's a tool that will not compromise

great architecture."

*"On the business side, we're more productive. We draw faster; produce more accurate working drawings. But the bottom line is how you do architecture. DataCAD lets us achieve the quality we demand"*

They started with one computer, one project. "Other firms and clients were asking whether we were CAD-based. We knew it was time. But we didn't think the transition would be so smooth."

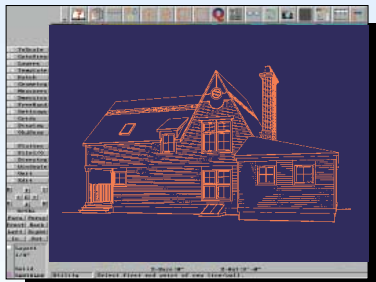

Use DataCAD 7 to set new standards of excellence in both your drawings and your finished projects.

Jeremiah thought computer-aided design would make his drawings look mechanical and limit creativity. Seeing a DataCAD demo changed his mind.

*"We were surprised to see that computer drawings could be just as beautiful as our hand drawings. We'd never seen that depth from a CAD program."*

Jeremiah expected computerizing to increase productivity. He didn't

DataCAD is intuitive and easy to use, allowing you to concentrate on design and not the software.

"Since '93, we've added five stations. It's simply good business. DataCAD helps us cut time and labor costs. Two or three people can work on the same drawing, so the time to make changes is minimized."

New DataCAD 7 offers 24-bit rendering, multi-scale plotting, cavity wall options, automatic roofing, walls and door framing, over 1,650 symbols and DWG/DXF translators. Yet we made it affordable for any firm.

### GUARANTEED RISK FREE

If you're not completely happy, return it within 45 days for a full refund, less shipping and handling.
