

**When it comes to your
company's CAD drawings,
Autodesk has you
right where they want you.**

Think about your CAD drawings for a minute. You created them. But who really controls them? Not you. It's Autodesk.

Fact is, for years now, Autodesk has had exclusive control over the DWG file format used to create nearly all CAD

drawings. They call it "100% Pure AutoCAD® DWG." We call it disturbing. For that reason, a group of industry leaders

has formed the OpenDWG™ Alliance to make DWG an open, industry-standard file format. We're also making available

a free OpenDWG Toolkit for you to download. That way everyone will be able to read and write DWG files — and you'll

truly own your CAD drawings. So visit www.opendwg.org/options. Voice your opinion. Join the

alliance. Download your free toolkit. And take back the CAD drawings that are rightfully yours.
