12 Reasons... you'll want to make the switch to DataCAD 8 for Windows

1 DataCAD 8 is a native, 32-bit CADD application for Windows 95/98/NT. That means you'll benefit from 32-bit performance while running DataCAD together with your other favorite Windows applications. Now you can take full advantage of the latest display cards, printers, and fax-modems designed for Windows 95/98/NT.

2 Save drawings and Quick Shade images as bitmap (.BMP) files for use in word processing and desktop publishing applications.

3 QuickShader with customizable background color and lighting intensity controls.

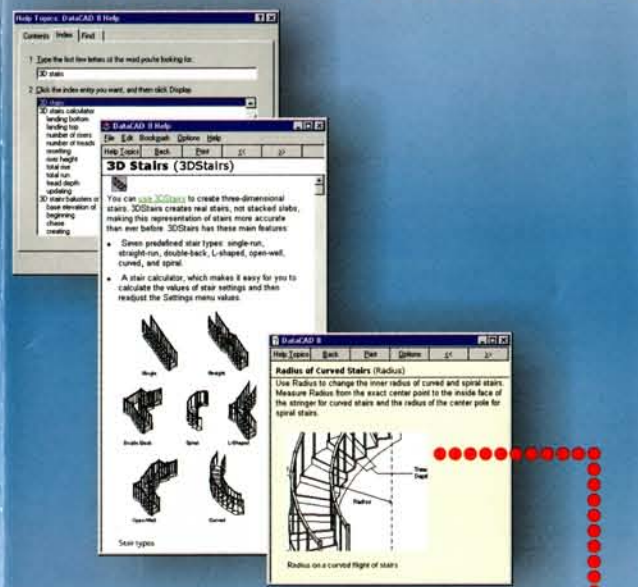

4 All the familiarity of DataCAD for DOS. The same menus, icons, hot keys, toolbars, line types and hatch patterns. DataCAD for Windows uses standard bitmap (.BMP) files so you can use any Windows paint program to create custom icons and line type and hatch pattern previews.

5 The standard Windows installation program is a breeze. DataCAD is ready to run as soon as you've installed it.

6 Windows file management. Open drawings and templates using the standard Windows dialog and have graphic access to all of your file folders. Right-click on any file for more information or create new job folders on-the-fly. Right-click on a template for editing in Windows Notepad.

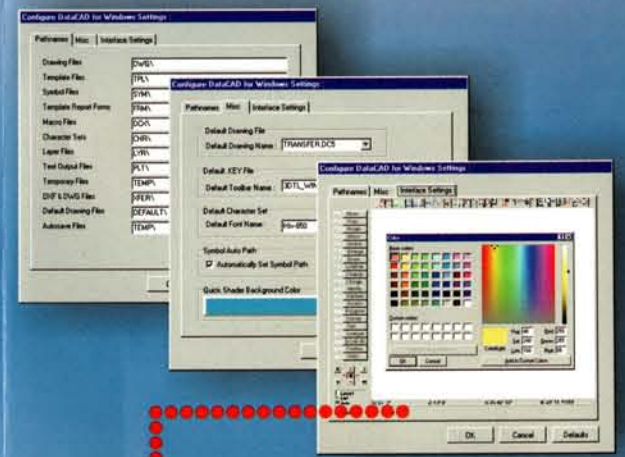

7 DC Viewer included! Use DC Viewer as a stand-alone view manipulation and image processing program for drawing review and presentation. DC Viewer lets you open an unlimited number of DataCAD drawings at once, without having to run DataCAD. Use DC Viewer to convert 3D models to VRML 2.0 (Virtual Reality Modeling Language) for use on your web site.

8 Comprehensive Windows online help. Now you can search for detailed information on any keyword. Access more specific information with hyperlinks we've added for greater usability. You can even add your own notes and print out the portions you want.

9 Take full control of your drawing output. With the new Pen Table you can specify line widths in millimeters, change the percent density, and print from as many as 16.8 million colors on your color printer. Save as many custom pen tables as you like.

10 FREE Productivity Pack version 3.0 for Windows. The renowned Productivity Pack for DataCAD 7 has been updated for Windows and is yours free when you buy DataCAD 8. Also sold separately.

11 Customize the drawing interface just the way you like it, right from within DataCAD. With the new interface settings dialog, you can customize the drawing background color using the Windows color picker. You can turn the toolbar on and off, set the menu window to the left or right, and set the menu window and message window text to any true type font. Set the text smaller to maximize the drawing window, or set the size larger for greater readability.

12 Visual Reality Suite included! New 32-bit rendering and animation for use with DataCAD models. Use Visual Reality to create photo-realistic images of your designs. Walk your client through the project with a full-color animation.
